Installation guide

The installation guide is in INSTALL.md at the repository root. It covers Conda, Docker and native installations on Windows, macOS and Linux, the optional RNArobo and Knotty engines, verification and troubleshooting.

RNArobo and Knotty (needed only by the RNArobo Search and Pseudoknot Finder pages) are installed inside the RSAS folder, in `bin/<platform>/`, without administrator rights: download RNArobo's ready-made Linux executable, build Knotty from source, or use the macOS builds bundled in `bin/macos/`. Step-by-step commands are in INSTALL.md, section 8.
